Managed Portfolio Service

Investment objective and policy

These discretionary managed model portfolios offer risk-profiled investment solutions, all of which have a dynamic top-down asset allocation strategy implemented using low cost ETFs.

The objective for the Adventurous model portfolio is to provide higher long-term returns whilst exposing the investor to Higher investment risk in accordance with their attitude to risk.

Key facts

<b>Inception Date</b>	31/03/2009
<b>Indicative Yield</b>	1%
<b>Typical Growth / Defensive Split</b>	80:20
<b>Annual Management Charge (including VAT)</b>	0.25%
<b>Total Ongoing Charges (of underlying funds)</b>	0.11%
<b>Portfolio Total Ongoing Charge</b>	<b>0.36%</b>

July saw US share markets continue to advance whilst the other developed markets fell back after their strong rallies during the second quarter. Early and aggressive US fiscal and monetary policy easing, with Covid-19 accelerating the digitisation of daily life helped drive the mega-cap US technology companies. An earlier cyclical recovery from lockdown was positive for Chinese shares and helped emerging markets outperform the developed region. Economic data for the second quarter confirmed that we have seen the biggest contraction in global activity since the Second World War.

Markets are hoping that we have left behind the worst of the Covid-19 pandemic and that future flare ups in the disease can be tackled by local not national lock downs. As expected, there are high rates of recovery in sectors where output ceased or was very damaged by the initial responses to the virus. It will, nevertheless, take time to get back to levels of income and output that preceded the disease. Share markets continue to draw support from loose money policies, but we expect the market environment to remain uncertain and volatile whilst businesses strive to adapt and recover, tensions escalate between the US and China and the US Presidential election looms.

Corporate bond spreads continued to retrace the spike higher seen in March but remain wider for the year to date. Boosting the rally in credit were 'better than expected' Q2 corporate earnings versus estimates and a quiet issuance market which helped push up valuations. The biggest boost to the corporate bond markets is still the buying of high yield bonds and 'Fallen Angel' ETFs by the US Federal Reserve and the ECB accepting high-yield bonds as eligible collateral for their funding operations. On the equities side, the hedged US Equity trackers were the best performing holdings, helped by the sizeable allocation to technology and currency protection from a weaker US dollar. Japanese equities detracted from returns, largely attributable to the outperformance of the pound against the yen. No changes were made this month.

## Adventurous

## Investment Team

The model portfolios are managed by the Charles Stanley Asset Management Division. The team of portfolio managers and analysts have extensive experience, drawing upon the expertise of investment specialists, strategists and economists both internally and externally. The research team looks for the best Index tracking funds from the available passive universe.

## Risk Profile

The Adventurous model portfolio targets a higher level of risk and return. The Model Portfolio is not hedged and therefore will be exposed to currency fluctuations arising from any international investments. The managers take currency exposures and risks into consideration when making international investments.

## Performance since Inception

## Important Information

**The value of investments, and any income derived from them, can fall as well as rise and may be affected by exchange rate variations. Investors may get back less than invested.**

Performance is calculated on a Total Return basis using a notional portfolio in Advent Portfolio Exchange (APX). Performance is net of Charles Stanley investment management fees but not adviser fees nor platform costs. Any charges and fees applied by platforms and/or authorised intermediaries will be charged in addition to the charges shown. The Total Ongoing Charges Figure (TOC) is calculated on a periodic basis using a weighted average of the most recent publicly available Total Ongoing Charges for the underlying investments as at the date of the factsheet. This includes the underlying funds' Ongoing Charges Figure plus Transaction costs plus Incidental costs. Please note that whilst we endeavour to show all charges associated with specific funds, sometimes this is not possible due to the information not being made available by the fund provider. In such cases transaction or incidental cost information may be missing.

The Indicative Yield is provided for guidance purposes only and is calculated on a periodic basis using a weighted average of the most recent publicly available income yields for the underlying investments. Yields for the underlying funds, and thus for the strategy, are likely to differ in the future. The Indicative Yield does not represent guaranteed income.

Portfolios linked to this Model Portfolio may not exactly replicate the model due to the difference in timing of initial investment or rebalancing differences resulting from minimum transaction size limits on platforms. The management and rebalancing of this Model Portfolio does not take Capital Gains Tax into consideration.

This factsheet has been prepared for information purposes only and does not constitute advice or a personal recommendation, nor does it constitute an invitation to purchase units or shares. The information on which the document is based is deemed to be reliable. Charles Stanley has not independently verified such information and its accuracy or completeness is not guaranteed. Charles Stanley is a trading name of Charles Stanley & Co. Limited, which is authorised and regulated by the Financial Conduct Authority.
